

# Regulatory Approaches for Induced Seismicity

Richard Simmers

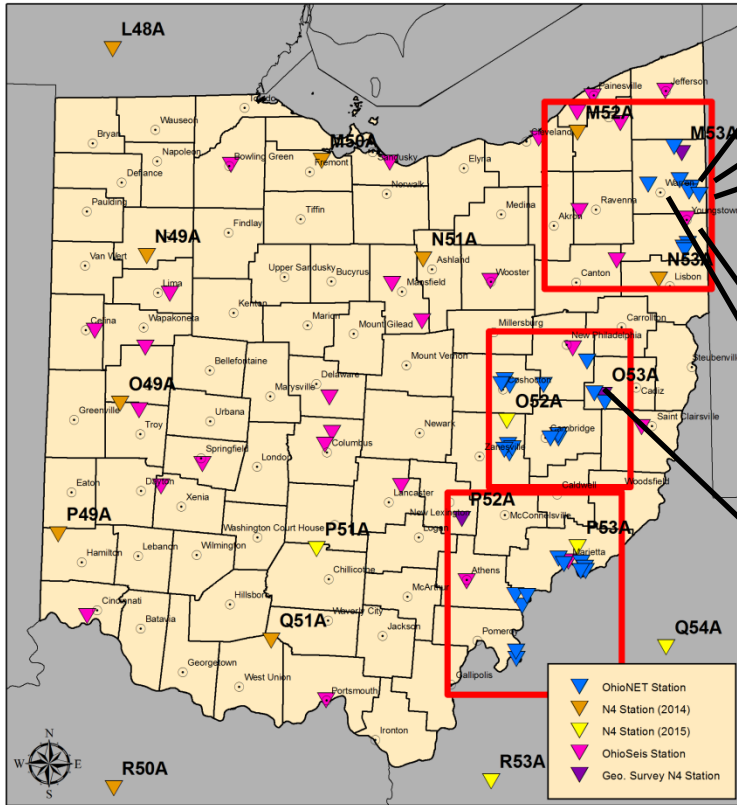

Chief, Division of Oil & Gas Resources Management

Ohio Department of Natural Resources

Ohio Department of  
**NATURAL RESOURCES**

**Ohio Department of Natural Resources: Division of Oil & Gas Resources Management OhioNET Seismic Network**

| Date               | Event   | Action   |
|--------------------|---|--|
| 2011               | Earthquakes detected in the Youngstown area   | In November, the Division detailed seismic monitoring began. Sensors received and deployed December 1, 2011  |
| December 23, 2011  | 2.7 Magnitude   | Division ordered well shut down 12/30/2011   |
| December 31, 2011  | 4.0 Magnitude   | All 3 wells in the immediate area shut down with a moratorium on all new well permits  |
| June 11, 2012      | New statute for injection wells   | Senate Bill 315 signed into law  |
| 2012               | Begin deployment of 3-component stations to monitor seismicity in Eastern Ohio                                    |  |
| March 14, 2014     | Events associated with well completion  | Operator required to deploy 8 sensors; alerts sent to ODNR in real time  |
| August 31, 2014    | 2.1 Magnitude associated with injection well  | Well shut down by Chief's Order  |
| September 10, 2015 | Numerous micro-seismic events magnitude -1.5 to 3.1; ODNR established time coincidence between pumping and events | Operator modified well completions procedures; no zipper completions; cut volumes by 20%; skipped stages; reduced pressures; joint operator-Division monitoring; successful completion |

# Current Seismic Permit Conditions for Injection Wells

*Ohio Revised Code Chapter 1501:0-3-06*

The chief may require the following tests or evaluations of a proposed brine injection well, in any combination that the chief deems necessary:

Geological investigation of potential faulting within the immediate vicinity of the proposed injection well location, which may include seismic surveys or other methods determined by the chief to assist in identifying potential faulting within the immediate vicinity of the proposed injection well.

Permit conditions may include seismic monitoring, pressure fall-off tests, spinner tests, radiative tracer, geophysical and electrical logs, and downhole pressure monitoring,

# Current Seismic Permit Conditions for Horizontal wells drilled near faults or areas of known seismic activity

Seismic monitors must be installed for a specified time period prior to completion operations

$M \geq 1.5$  – Direct communication starts between operator and Division

$M = 2.0 - 2.5$  – Modify completion operations (e.g. no zipper completions, skip stages, cut volumes and pressures)

$M \geq 2.5$  – Halt completions on certain portions of the pad

# Earthworm Alert – Harrison County during Hydraulic Fracturing Operation

Ohio DNR EW Automated Preliminary Earthquake Location: Please note that earthquake data may be preliminary and subject to change. - EW Event ID: 7298

## OhioNET Seismic Network

- 21 ODNR owned stations
- 12 Operator leased stations
- 13 operator stations (ODNR receives alerts and data as needed)

Total: 61 3-component stations

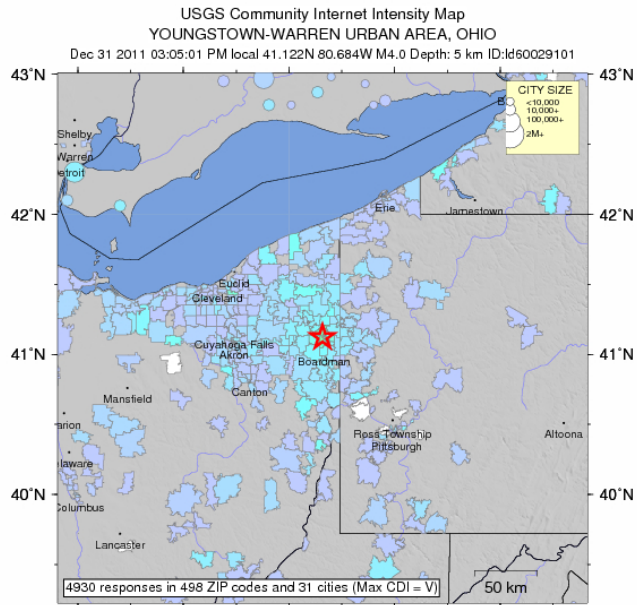

Adding staff and stations in summer of 2016, including surface accelerometers to measure particle velocity

# Ref Tek Real Time System
