

Staff Report

November 30, 2009

I. STATISTICS

Our monthly statistics and permit activity report are on pages 14 through 18. These statistics include the permit and location assessment information that were previously included on the first page of the staff report.

II. NORTHWEST COLORADO

◆ Northwest Colorado Oil and Gas Forum

The Forum is an informal gathering of local, state, and federal government officials, oil and gas industry representatives, and citizens that have met regularly since 1989. The purpose of the Forum is to share information about oil and gas development in northwest Colorado and to make government officials and oil and gas industry representatives easily accessible to the public. Currently the meetings are conducted once per quarter and are co-chaired by the COGCC's Director, Dave Neslin, and Garfield County Commissioner, Mike Samson.

The next meeting is scheduled for December 3, 2009, at 10:00 am.

NOTE: Venue change for this meeting only. This December meeting will be at the Colorado Mountain College—West Garfield Campus, 3695 Airport Road in Rifle, CO.

All parties wishing to be placed on the meeting agenda should contact Chris Canfield at: 970-625-2497 or via email at: chris.canfield@state.co.us.

◆ Piceance Basin Request for Information

A Request For Information (RFI) was sent to Piceance Basin operators on October 23, 2009. The RFI required that operators provide an inventory of oil and gas locations, number of per-

mitted wells per location, the number of wells where surface casing or conductor casing have been set but the wells not drilled and a list of pits on these locations. The submittal date was November 9, 2009, and industry response was extremely positive. Operators provided detailed inventories and actively engaged with the COGCC to discuss issues that may arise due to the slowdown in drilling activities. The data will allow the COGCC to work with operators to ensure that interim reclamation, site stabilization procedures and stormwater best management practices (BMP) are implemented and maintained during the downturn and that site security is maintained at potentially inactive locations.

III. SOUTHWEST COLORADO

◆ Gas and Oil Regulatory Team (GORT) Meeting

The next GORT/Southwest Colorado Oil and Gas Stakeholders meeting is scheduled for January 14, 2010, at 8:30 am at the La Plata County Fairgrounds in Durango, Colorado.

All parties wishing to be placed on the next meeting agenda should contact Karen Spray at: 970-259-1619 or karen.spray@state.co.us. Demonstrations of new technology or unique solutions to problems are always well received.

◆ Fruitland Formation Outcrop Mitigation and Monitoring Projects (4M Projects)

Fruitland Formation Mapping - Archuleta County. As part of the 4M Projects, the Colorado Geological Survey (CGS) has finalized a detailed geologic map of the Fruitland Formation outcrop in Archuleta County. CGS is working to complete the report associated with the results of the mapping project. The final map and associated report will be posted to the website after receipt from the CGS. The

mapped extent of the Fruitland Coal outcrop in Archuleta County is now available in COGIS as the layer "San Juan Basin - Archuleta_Kf."

Fruitland Formation Outcrop - 4M Pilot Scale Mitigation Projects La Plata County. The South Fork Texas Creek (SFTC) system was shut down in early October 2009 due to a faulty methane sensor. A new sensor was ordered and installed, but it failed within a week of installation, so another type of sensor has been ordered and it will be installed upon receipt. As a result, electricity is not currently being generated at the site. Once the system can be operated safely it will be put back online. Gas continues to be collected and vented at the Pine River Ranches (PRR) location. Data collection and assessment will continue for a period of one year.

4M Monitoring Wells La Plata County. Installation of the 4M monitoring wells is ongoing. At the BP Highlands location, the contact between the Fruitland Formation and the Pictured Cliffs was encountered at a depth of 195 feet below ground surface (fbgs), which was shallower than expected; therefore, only one well was needed to monitor the coal seams at this location. The Fruitland/Pictured Cliffs contact was also encountered at a shallower depth (approximately 400 fbgs) than anticipated at the Fiddler location. Wells have been installed and completed at both locations and are awaiting instrumentation.

The Fruitland/Pictured Cliffs contact at the Palmer Ranch location was encountered at a depth of approximately 720 fbgs, and the Fruitland Formation is comprised of several good coal seams. A well is currently being completed and it is anticipated, weather permitting, that all of the wells should be instrumented and operational by early December. Well site reclamation and re-contouring has been conducted at both the BP Highlands and Fiddler locations, although re-seeding will not occur until the spring. Reclamation at the Palmer Ranch location will occur as soon as possible after well completion and installation of the monitoring equipment and as weather conditions permit.

Pressure data from 2 of the existing 3M monitoring wells, one at Basin Creek and one at South Fork Texas Creek, indicate possible leaks or transducer issues with the 2009-installed equipment. Norwest/Applied Hydrology will investigate and attempt repairs during their next site visit.

4M Monitoring Wells Archuleta County. Pressure data from one of the wells at Wagon Gulch indicates a potential leak in the wellhead. Norwest/Applied Hydrology will investigate and attempt to repair this leak during their next site visit.

Souder, Miller & Associates has provided the COGCC staff a final report for the monitoring well installation and reclamation conducted in 2008 and 2009. A copy of the final report, including formation pressures, well completion diagrams, and coal core analytical results, will be posted on the COGCC website soon.

♦ San Juan Basin Coalbed Methane Water Quality Analysis (WQA)

The objective of this study is to assess potential long-term trends in general groundwater quality in the San Juan Basin based on data available in the existing COGCC database. Work on this project has begun and a draft report should be available for staff review by the end of 2009. Data quality review is complete and trend analysis evaluations have been initiated.

♦ Northern San Juan Basin Technical Advisory Group

Steve Lindblom and Karen Spray have been participating in the Northern San Juan Basin Groundwater Model Technical Advisory Group (NSJB TAG). The NSJB TAG consists of experts in hydrogeology, groundwater modeling, geology, and water resources from industry, the Colorado Geological Survey, the COGCC, the Colorado State Engineers Office, and the Colorado School of Mines. A draft report was delivered on September 21, 2009, for review by the NSJB TAG.

IV. NORTHEAST COLORADO

♦ Commission Field Tour

On October 26, 2009, the northeast area COGCC staff organized and supported a Commissioner field tour of the Anadarko Commons drill site (Extreme Rig 11), a high density production pad and reclamation site in the Town of Frederick.

♦ Nelson Water Well Logan County

COGCC began investigating the Nelson water well in 2007. Water samples had been collected from the Nelson Well by other parties as early as 1984, and it was apparent that the quality of the water had deteriorated significantly over time. To identify the source of the apparent impact, COGCC retained Terracon Consultants, Inc. to perform additional sampling and analysis of the Nelson water well and produced water from nearby oil and gas operations. Terracon also evaluated all historic data and concluded in a report dated December 3, 2008, that the Nelson Water Well had been impacted by produced water disposed at infiltration pits at the Schwake A-2 tank battery. Over 2 million barrels of produced water had been disposed at this location between 1954 and 1998.

COGCC agreed with the conclusion and issued a Notice of Alleged Violation (NOAV) to Schneider Energy Services, who currently operates the Schwake A-2 on behalf of Merchant Energy Partners. Corrective actions stipulated in the NOAV included providing an alternate potable water supply for the Nelson residence and proper closure of the produced water pits at the Schwake A-2 tank battery. Merchant Energy Partners is currently developing a gas storage facility in the West Peetz Field where the Schwake A-2 is located, and although they never disposed of produced water in the Schwake A-2 water pits, they agreed to the corrective actions required by the NOAV. In cooperation with past operators, Merchant Energy installed a replacement water well for the Nelson residence in October 2009. Merchant Energy is currently evaluating the extent of soil contamination associated with the water pits to develop an appropriate closure plan.

V. SOUTHEAST COLORADO

♦ Methane Investigation Monitoring, and Mitigation Plan (MIMMP) - Huerfano County

Phase 1 Update

Three monitoring wells, 4 recovery, and 8 injection wells have been drilled, completed and tested by Petroglyph Energy Inc. (PEI) as part of Phase 1 of the MIMMP. Treatment under Phase 1 consists of physically separating methane from the recovered groundwater using a vertical separator. The methane is sent to a controlled flare for combustion. Operation of the pump, treatment, and injection system started on December 8, 2008. More than 8.9 million gallons of water had been pumped to the surface and treated as of November 1, 2009. More than 99% of that water has been re-injected into the aquifer after treatment. PEI has proposed adding one domestic well to the methane and water recovery system to hasten removal of free gas from the impacted aquifer systems. The domestic well would function as a removal well with the water re-injected in a nearby injection well that is already part of the system. PEI has applied for this use to the United States Environmental Protection Agency (EPA) and the Colorado Division of Water Resources with consent of the domestic well owner. COGCC staff agree with PEI regarding the utility of this change.

Gas flows are monitored at 4 domestic wells by PEI or its consultant and at 2 domestic wells by COGCC and its consultant. Overall gas flow has decreased in all monitored domestic wells.

During the period from September 23, 2009, to November 1, 2009, PEI screened 83 domestic water wells for the presence of methane with hand-held methane detectors for changes in percent volume of methane, %LEL, and %O₂. Methane was not detected at 48 of the wells. Methane was detected at 35 of the screened wells and levels of methane decreased in 9 of these. Twenty-six domestic wells had increases in methane levels detected during this monitoring period. Seventeen of the wells showing increases are drilled into coal bearing formations or into formations deeper than the coals.

Seven of the wells showing increases in methane are believed to be completed in the impacted Poison Canyon Formation near the remediation system.

A helicopter borne methane survey was conducted in early September 2009. Ground verification of results is underway. The results of the combined aerial and ground surveys will be provided to the COGCC as a separate report in the near future.

Mitigation

PEI is currently supplying water to 16 homes upon request of the well owner. Methane alarms have been installed in 14 homes.

Phase II

The United States Environmental Protection Agency (EPA) held a public meeting in Walsenburg on August 10, 2009, regarding PEI's applications for wells that would be used to inject Vermejo Formation water produced from coal-bed methane (CBM) wells into water-bearing units in the Poison Canyon Formation. The EPA is still in the process of reviewing and addressing written and oral comments received during and after the public hearing. PEI has submitted an application to the Colorado Division of Water Resources to ask for changes to water sources and injection as part of the process of initiating Phase II. Approval to operate some of PEI's CBM wells by the COGCC will also be needed prior to initiation of Phase II.

VI. ORGANIZATION

Boris (Bo) Brown has been hired as a Field Inspector in the central Wattenberg Area of northeastern Colorado. Bo has an extensive oil and gas background having worked as a drilling supervisor for Marathon Oil Company and as a Petroleum Engineer Technician with the Bureau of Land Management (BLM) where he performed oil and gas inspections and conducted extensive oilfield training programs for BLM personnel. Bo will report to Ed Binkley, the Northeast Area Inspection Supervisor.

An updated 3-page organizational chart can be found on pages 10-12. For contact information,

please go to our website and click on "Contacts" on our homepage, and then "Staff Contact Information."

VII.PLANNING/ADMINISTRATION/OTHER

◆ Onsite Inspection Policy

Under the Policy For Onsite Inspections On Lands Where The Surface Owner Is Not A Party To A Surface Use Agreement, which was effective for Applications for Permits-to-Drill (APDs) submitted after February 15, 2005, the COGCC has received to date a total of 133 requests for onsite inspections.

Twenty-nine onsite inspections have been conducted, 87 requests for inspections have been withdrawn, one onsite inspection is being scheduled, and 16 onsite inspections are pending and will be scheduled, if necessary, after the APD is received, or after issues related to local governmental designee consultation, location change, or surface use agreements are resolved.

Of the 133 requests for onsite inspection, 72 were for locations in Weld County, 24 for Las Animas County, 9 for Adams County, 7 for La Plata County, 5 for Garfield County, 3 each for Archuleta, Boulder and Yuma Counties, 2 each for Logan and Morgan Counties, and 1 each for Baca, Kiowa, and Larimer Counties.

In addition to the Onsite Inspection Policy, on-site inspections are being conducted in the San Juan Basin under Cause 112, Order Nos. 156 and 157 where an Onsite Inspection was required because an APD was submitted without a surface use agreement. Several onsite inspections under Cause 112, Orders 156 and 157 are anticipated in the next few months, depending upon operator activity in the area.

◆ Plugging and Well Reclamation (PAWR) Fund Status

On page 13 is the spreadsheet listing PAWR projects for Fiscal Year '09-'10 that are planned (work has not yet commenced), in progress (work has been completed but invoices have not yet been submitted), and completed

work. One well has been added and completed during the month of November.

◆ January 2010 Hearing Docket

A preliminary docket for the January 2010 hearing has been provided. Hearing dockets are available on our website by clicking on "Hearings." Links to the notices and hearing applications are available from the Docket Number and Applicant, respectively. To sign up for e-mail notification of hearing notices and applications, please see the announcement and instructions on the homepage of the COGCC website at: www.colorado.gov/cogcc.

◆ Colorado Oil and Gas Information System ("COGIS")

The COGCC information system, COGIS, is made up of many different components that are used by the Commission, staff, industry, government agencies and many others.

➤ Internet

The COGCC determined it was most cost effective to develop applications and information in an Internet-available format. This allows for the same tools to be utilized in different environments, thus eliminating the re-creation of applications. The Internet connection was moved to a new network structure which provides a much more secure environment. The following are tabs on the Internet menu bar:

* General

This page has links to basic information concerning the Commission, its function, and oil and gas development in Colorado.

* Contacts

This page has links to people and agencies that are involved with oil and gas regulation and related issues in the state. The page also contains phone lists and geographic areas of responsibility for COGCC staff.

* Library

This page contains links to documents resulting from Commission studies, activity reports, and statistical downloads. The annual statistics and the weekly/monthly statistics are available here.

* Hearings

This page has links to the current and previous hearing schedules, which allow for review of the dockets, agendas, applications and their outcome. It also has information that is useful when considering filing an application for hearing or finding information about Commissioners.

* Rules

This page contains links to the Commission statute, Rules and Regulations, and policies.

* Policies

This page contains links to Commission policies.

* Orders

This application provides searchable capability of the Commission's orders. The search by location is still under construction as we create the map layers for all spacing orders.

* Forms

All forms are available as Adobe Acrobat documents that can be downloaded, completed, printed and mailed; some are available as Excel and Word documents. Some example and instruction documents are viewable. The forms used by operators to submit information on location of wells and completion reports have been modified to accept latitude and longitude data. Eventually, online forms will be available here, but the exact time frame is unknown.

* Staff Report

Current and previous staff reports are viewable here.

* Permits

This application shows the last 12 months of approved permits and current pending permits; it may be filtered by county.

* News/Media

This category provides general information to the media. It contains statistics, charts, graphs, and other items of interest.

* Database

This application enables users to query well, production, and operator information. These queried databases contain the most current set of data and are updated throughout the day.

* Local Gov

This application provides database searches for local government contact information and oil and gas activity within a selected area.

* Images

This application is an interface to the COGCC's historical paper files. All well files, logs, and hearing files have been scanned. This application is not user friendly and the preferred method is to use the database queries and click on the "docs" icon for wells and other facilities, or to use the Orders application.

* Maps

This interactive map application allows the user to zoom, pan, and select types of information to display. This application will also display the database information for wells by selection tools or double clicking on a single item. There are also tools to allow annotations and to save reusable map files.

Three map layers were added to the GIS Online main map in support of the Final Amended Rules approved in December 2008:

1. Wildlife Restricted Surface Occupancy (RSO) Areas
2. Sensitive Wildlife Habitats (SWH)
3. Rule 317B Surface Water Supply Area Buffers

These map layers will be used to determine if a proposed drilling location is subject to the provisions of the new rules. In addition, a second map was added, entitled "Wildlife Map." The Wildlife map displays the wildlife species-specific RSO and SWH areas. The Wildlife map data were provided by Colorado Department of Wildlife (CDOW). Surface Water Supply area data were provided by Colorado Department of Public Health and Environment (CDPHE). The CDOW and CDPHE GIS staffs were very helpful regarding data requests.

A statewide water wells map layer was added to the Internet on August 5, 2005. Many thanks to the Division of Water Resources for allowing us to display its data.

The online maps and GIS download files have been updated to switch the datum used to NAD 1983.

The National Resource Conservation Service Soil Data Mart is included on our maps. Through these links the public can get reports on the soil surveys for any area of the state.

Color images obtained from the United States Department of Agriculture-Farm Service Agency are included on the COGCC Online map system. These images encompass the entire state and were taken in 2005. The black and white images were obtained from the same federal agency. These images were taken in the years between 1989 and 2001.

The COGCC, in cooperation with the BLM, added map layers containing the lease stipulations from the BLM to the COGCC GIS Online site. Among the layers available include Federal Oil and Gas leases, Federal Surface leases, BLM Master Plats, and Federal Oil and Gas Subsurface Rights.

* Help

In December 2008, two search tools were added to the Help menu to be used in conjunction with the map layers that were added for the Final Amended Rules.

The Oil & Gas Activity Notification Tool allows a user to enter a section-township-range of interest which returns a table identifying which quarter-quarter sections are subject to Rule 317B, Wildlife Restricted Surface Occupancy (RSO) Areas, and/or Sensitive Wildlife Habitats (SWH) requirements. The user can then click on a link which opens the map, and zoom to the section of interest for further inspection.

The Map Temporary Coordinated Tool allows the user to enter a latitude and longitude to view on the map. The user can then turn on the relevant map layers to see which layers intersect the entered coordinates.

A tutorial document for the COGCC Interim Policy for APDs is posted in the Help area and the homepage of the website. This document helps explain the interim process that the COGCC used for processing APDs until the Final Amended Rules took effect. Included in the document are explanations on how to use the new tools and map layers that have been developed for the Final Amended Rules.

The COGCC, with assistance from the Ground Water Quality Protection Council, has produced two Macromedia Flash movies to help users understand the many features available within the COGCC GIS Online system. The movies are located by clicking on the HELP link from the main menu or by using the following link: http://colorado.gov/cogcc/COGIS_Help/Help.asp.

Two applications on the COGCC website are available to help operators with the entering of data relating to locations. The first, a Footage calculator, will take a new latitude and longitude and calculate new footage calls based on the location supplied at the time of permitting. The tool should only be used to compare locations where latitude and longitude were supplied on the permit as required by the December 1, 2005, rule change. The second application converts latitude and longitude as measured in degrees, minutes, and seconds into decimal degrees. The decimal degree format is what COGIS is expecting on all forms requiring lat/long coordinates.

The eForm Training Manual covers the material presented in the 3 training sessions that were held to introduce the new electronic form submission tool to the industry. The application has been receiving forms from the industry since July 2009.

The manual can be found at http://cogcc.state.co.us/COGIS_Help/eForm_training_manual.pdf. A document explaining the Local Government Designee process in eForm is now available in the Help section.

➤ Local Area Network

The COGCC staff is connected to services by a Local Area Network ("LAN") connection which provides email and data sharing capabilities. The LAN is connected to the Centennial Building at 1313 Sherman Street by a wireless interface; this connection provides access to the Internet and other state services. COGCC staff utilizes the same applications in its work as Internet users, in addition to others outlined below.

* Database

The COGCC maintains a comprehensive database of regulated facilities (wells, pits, injection sites), incidents (inspections, com-

plaints, spills), and affiliations (companies and contacts).

* Imaging

This application provides the capability to convert the paper documents received by the Commission to electronically available documents.

* Form Processors

This set of applications allows users to input, route, edit, and update regulatory reports submitted by oil and gas operators.

* eForm

This application utilizing the same code base that industry uses to submit APD's (Form 2) and Oil and Gas Location Assessment Form (Form 2A), is being used by staff to input, route, edit, and update these forms internally.

* Geographic Information Systems (GIS)

These applications provide the capability to create custom maps, convert survey calls to geographic coordinates, and convert and utilize geographic positioning system (GPS) data.

The GIS Administrator creates daily updates for the Internet map data downloads.

* COGIS Tools

This set of applications allows COGCC staff to correct data in the database in addition to performing specialized workflow administration.

➤ Remote Users

This is the final component of the COGIS system. This laptop system consists of Internet applications and other report tools necessary for COGCC field staff to facilitate data collection and provide information.

* Electronic Business

There are approximately 200 operators reporting production electronically.

◆ COGIS Projects, Updates and Changes Electronic Form Submission

As of July 1, 2009, operators have been electronically filing Applications for Permits-to-Drill (APDs) and the new Oil and Gas Location Assessment (OGLA) forms. The system allows the operator to submit the data for the form and all of the required attachments. Attachments

must be in a PDF file format. Benefits of the eForm's application to the operator include the ability to circulate the forms internally and check data prior to submitting to the COGCC and a decrease in the time it takes for the form to begin its regulatory review. Additional features of the new application include the tracking of the regulatory form as it is being reviewed within the COGCC, the viewing of the required attachments as the form is being reviewed, along with allowing public comments on certain regulatory forms.

Along with the eForm system, a page is available where the operators can review all known bugs within the system and report any new ones they discover.

The public can now make comments on all submitted OGLA forms (Form 2A) through the eForm system. This is accomplished by going to the COGCC website (<http://www.colorado.gov/cogcc>) and clicking on the menu option, "Permits", (or <http://cogcc.state.co.us/COGIS/DrillingPermits.asp>). On the COGIS-Permits page, two new search options have been added, "All Pending Location Assessments for" and "All Approved Location Assessments for." When the results are displayed for forms in process, the public can click on the document number, which logs the user onto the new eForm application. Once the page is displayed with the selected document, the user can select the Comment button to make a comment on that particular form. The public can use this same method to make comments on APDs (Form 2).

Since October 1, 2009, operators have submitted 292 or 52% of all APDs through the eForm system and 105 or 53% of the Form 2As through eForm. Since the start of electronic submission at the beginning of July, 53% of all permits (Form 2 or Form 2A) have been submitted through eForm.

The second release of the application has been released with improvements to the dashboard that include the well name and number along with location information for that document.

Rulemaking Activity Page

The Final Amended Rules have been published and posted to the COGCC's website homepage at: <http://www.colorado.gov/cogcc>. The pages associated with rulemaking activity, including numerous documents filed, public comments, and audio recordings of the proceedings are still available.

US Standard XML Reporting Project

The COGCC, the Ground Water Quality Protection Council, and agencies from several other states have been working together to establish an XML file format for permitting wells and reporting well completions. The working group issued a beta version to members of industry for their review and comment in February 2007. After a second review and discussion among the working group, the final version was published to the industry in June 2007. The next phase of this project is underway with the development of the application within the agencies to handle the submission of the XML files for processing. With the release of eForm, another review has been undertaken to integrate the schema with eForm.

LAS File Upload

All digital well logs submitted to the COGCC over the Internet are to be in LAS (log ASCII) format. In addition to the LAS file, a paper log file is still required. Additionally an operator can submit the same log file in a PDS format, but the PDS format cannot replace the LAS requirement. To submit digital well logs over the Internet, an application must be completed. The application is available from the "Forms" page on the COGCC website <http://www.colorado.gov/cogcc>. To utilize the system, the operator will need to submit a Designation of Agent Form, Form 1A. COGCC staff is working with operators and logging companies to gain compliance with the digital log submission requirement. The rule still requires the operator to submit a paper copy of each well log (Rule 308A). All operators are required to be in compliance with this Rule for all wells completed since July 2004.

Spacing Orders Project

The spacing orders are being evaluated and posted on the maps, with over 85% of the state

having been reviewed. The Wattenberg Field in northeast Colorado is the only area remaining to be completed.

Mapping Directional Wellbores Project

This is an industry-sponsored project to make the directional wellbores visible on the Internet map. The COGCC, along with other states, is working with the Ground Water Quality Protection Council to establish a standard format for electronic submission of directional survey data. Many thanks to Mr. Dewey Gerdom of Petroleum Development Corporation for his insight regarding the need for such a data set.

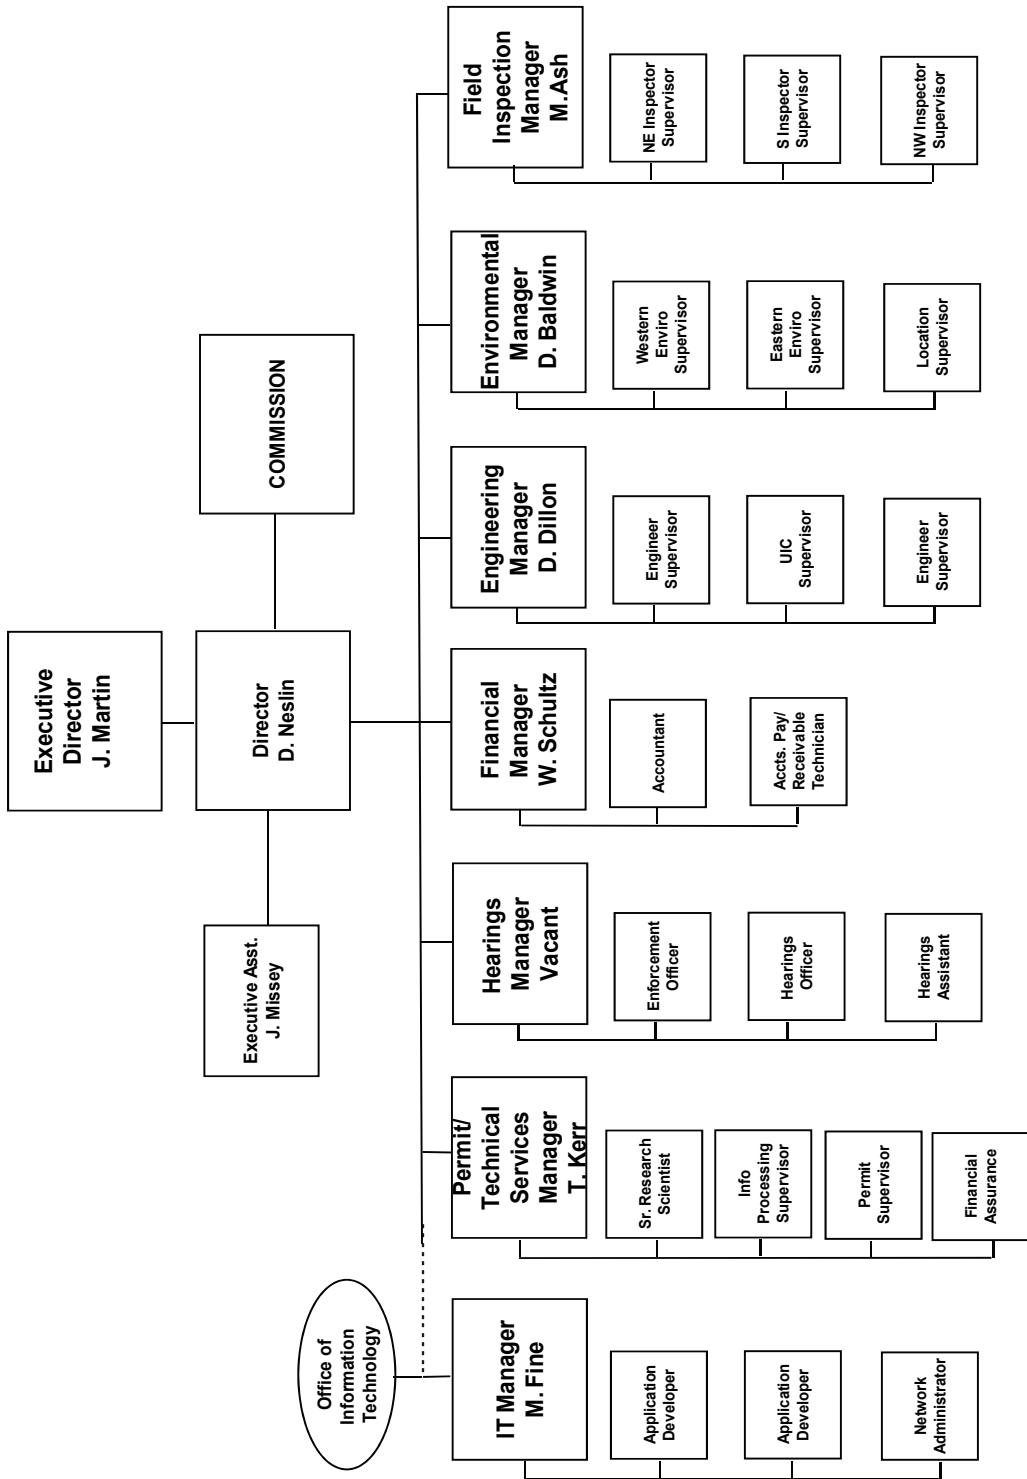

VIII. VARIANCES

1. A variance under Rule 502.b. was granted on October 22, 2009, from COGCC Rule 907.d.(3).B.ii, which requires incorporation of water-based bentonitic drilling fluids into soils within 10 days of application. This variance was granted to Wiegking-Fullerton for a location in Lincoln County for a well located in the NE $\frac{1}{4}$ of the SW $\frac{1}{4}$ of Section 19, Township 10 South, Range 55 West, 6th P.M. The bentonitic material will be incorporated within 6 months in accordance with the surface owner schedule.
2. ExxonMobil Oil Corporation (“ExxonMobil”) submitted Sundry Notices requesting a variance to the production casing compressive strength requirements of Rule 317.i., for the planned North Piceance Unit 197-5A1 Well, which is located in the NW $\frac{1}{4}$ of the SE $\frac{1}{4}$ of Section 5, Township 1 South, Range 97 West, 6th P.M., for the planned North Piceance Unit 197-12A1 well located in the NW $\frac{1}{4}$ of the SE $\frac{1}{4}$ of Section 12, Township 1 South, Range 97 West, 6th P.M., and for the planned Expanded Liberty Unit 395-21A1 Well located in the SW $\frac{1}{4}$ of the NW $\frac{1}{4}$ of Section 21, Township 3 South, Range 95 West, 6th P.M. All of the wells listed above have federal jurisdiction for surface and minerals.

As a result of the use of high-temperature-capable cement retarders in the cement slurry, ExxonMobil’s production casing cement design for these wells does not meet the temperature requirement of Rule 317.i., which specifies that production casing cement “shall be of adequate quality to achieve a minimum compressive strength of at least three hundred (300) psi after twenty-four (24) hours and eight hundred (800) psi after seventy-two (72) hours measured at ninety-five degrees fahrenheit (95°F) and at eight hundred (800) psi.” ExxonMobil’s production casing cement design will meet the required compressive strengths within the required timeframes at the expected downhole temperatures.

ExxonMobil contends that the requested variances do not violate the basic intent of the Oil & Gas Conservation Act. On October 26, 2009, COGCC staff approved ExxonMobil’s Rule 317.i variance request for the North Piceance Unit 197-5A1 Well, and on November 3, 2009, COGCC staff approved ExxonMobil’s Rule 317.i variance requests for the North Piceance Unit 197-12A1 Well and for the Expanded Liberty Unit 395-21A1 Well. ExxonMobil has submitted similar requests to the Bureau of Land Management.

3. A variance under Rule 502.b. was granted on November 20, 2009, with the approval of the Application for Permit-to-Drill the Texas American Resources Company (TARC) North Colorado CNW-13, 11-13 and 22-13 Wells, located in the NE $\frac{1}{4}$ of the NW $\frac{1}{4}$ of Section 13, Township 1 South, Range 68 West in Adams County. The well locations are an exception to Rule 603.a.1. statewide setbacks, 603c., high density area rules for building units, and 603b., high density area rules for other facilities.
